Districts with blanks in columns 2, 4, or 5 were not assigned a score or parity level because they have <11 students in the CDE data set. We still include the number of additional students needed to reach parity to provide helpful information for goal setting and advocacy.

The dual enrollment participation score is displayed as 100% if the percentage of dual enrollment students is equal to or greater than the percentage of high school students in that group.

*We estimate the district has achieved parity for this racial/ethnic group, but we encourage local leaders to consider additional opportunities to expand dual enrollment equity in alignment with our report recommendations.
